

ABDURREHMAN TARIQ

Full Stack / Cloud Engineer

www.artariq.dev | artariq.dev.1@gmail.com | linkedin.com/in/artariq-dev | github.com/artariq-dev

PROFESSIONAL SUMMARY

13+ international clients, 5+ teams, 5 countries (US, UK, UAE, Germany, New Zealand) — nearly 6 years building production systems as a forward deployed Full-Stack Developer with Cloud and DevOps expertise, I deliver projects from e-commerce storefronts and CRMs to cloud infrastructure and AI-powered automation. Targeting senior remote full stack roles with international teams.

CORE SKILLS

- **Languages:** Python, JavaScript, TypeScript
- **Frameworks:** Django, Flask, Vue.js, Nuxt.js, React.js, Next.js, Node.js, Express.js, GraphQL, REST APIs, Celery
- **Databases:** PostgreSQL, PostGIS, Redis, MongoDB, Firebase Firestore, Elasticsearch
- **AI & Automation:** Claude API, OpenAI API, DeepSeek API, Google Ads API, Meta Ads API, MCP Server Development
- **Cloud/DevOps:** AWS, Azure, DigitalOcean, Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, ArgoCD
- **E-Commerce/CMS:** Magento 2, Shopify, Strapi, Vue Storefront 2
- **Frontend:** Tailwind CSS, UnoCSS, Mapbox, Plotly, Algolia InstantSearch
- **Tools:** Stripe API, Postman, Git/GitHub/GitLab/Bitbucket

PROFESSIONAL EXPERIENCE

Full-Stack Developer & Cloud Engineer — MLabs (Remote, UK) — Sept 2024–Present

5+ international clients across US, UK, UAE, New Zealand

- Processed 100+ daily records with automated lead intake, order tracking, and analytics — built an end-to-end multi-tenant CRM for a solar energy client (Django, PostgreSQL/PostGIS, Celery, Redis)
- Cut CPA by 36%, achieved 3.4x ROAS in 60 days — integrated Claude API into a CRM backend, automating 5,000+ monthly customer communications
- Improved ROAS by 68–70%, reduced CPA by 36–38% for a UK client — engineered a geospatial marketing intelligence platform (Plotly, Mapbox, PostGIS, Django REST) tracking 3–4 live ad campaigns
- Secured multi-tenant data access across 5+ client deployments — architected RESTful API backends (Django REST Framework) with RBAC and JWT authentication
- Containerized and deployed full-stack applications (Docker, Kubernetes) into reproducible, version-controlled deployments across client environments — eliminated manual, inconsistent server setups
- Cloud infrastructure as code (Terraform) provisioning across AWS, Azure, and DigitalOcean — reduced environment setup from manual and error-prone to repeatable and auditable
- Automated CI/CD pipelines (GitHub Actions, Jenkins, ArgoCD) across 5+ client environments — cut deployment time from days to minutes, reduced manual effort by 70–80%

Full-Stack Developer — Digital Perception (On Site — clients in UK/Germany) — Feb 2021–Sept 2024

6+ platforms delivered · 10+ junior developers guided

- Led architecture decisions across engagements spanning B2B and B2C platforms — owned schema design, API structure, and third-party integrations (payments, search, geolocation)

- Cut TTFB by 83% (1,500ms → 90ms) for 120,000+ monthly visitors and 4,700+ products — migrated a high-traffic headless e-commerce storefront (Nuxt 2 → Nuxt 3, Magento 2 GraphQL, Vue Storefront 2)
- Served 80,000+ monthly visitors with 6–11 configurations per product — built an interactive 3D product configurator (Nuxt.js, Vue.js, UnoCSS) for a premium retail client
- Connected 180+ providers with 600+ clients via sub-100ms search — developed a local services marketplace (Nuxt 3, Algolia, Mapbox, Pinia, TypeScript)
- Built a multi-language SaaS platform for a Shopify agency, with Stripe subscriptions and EN/DE localisation (Nuxt 3, Firebase, vue-i18n)
- Cut content update time from days to seconds — architected a headless CMS and edge-deployed storefront (Strapi, Nuxt 3, Cloudflare Workers)

KEY PROJECTS

- **Solar CRM & AI Workflow Engine (NZ)** — Unified fragmented SaaS tools into one Django/PostgreSQL CRM with Claude API-driven customer communication. Saved €11K–€23K/year in licensing; 5,000+ automated monthly messages; 36% CPA cut; 3.4x ROAS in 60 days; 100+ users.
- **Clinical Operations & Geospatial Platform (UK)** — MERN internal ops platform for a multi-branch clinic network: appointment scheduling, staff allocation, and a geospatial heatmap for targeted ad campaigns. 50+ staff users, 100s of daily records.
- **PapierFischer — Headless E-Commerce Storefront (Germany)** — Migrated a high-traffic Magento 2/Vue Storefront 2 storefront from Nuxt 2 to Nuxt 3, with Docker-based deployment and CI/CD (GitHub Actions) across a 5-developer team. Cut TTFB by 83% (1,500ms → 90ms) for 120,000+ monthly visitors and 4,700+ products.
- **Kitchenz — 3D Kitchen Configurator (Germany)** — Upgraded legacy planner to support 6–11 configurations per model. 80,000+ monthly visitors, 6-developer team, 6–8 month build.
- **Find 24 — Service Marketplace (In-house)** — Full-stack marketplace with Algolia search and Mapbox live provider mapping. 180+ providers, 600+ clients, sub-100ms search, 3 auth methods.
- **Ask AR Tariq (Personal)** — Software Audit Scorecard — Independent product: free 8-question software audit scorecard plus a spintax-based outreach engine (Google Apps Script, Gmail API) sending 400+ monthly emails across a 3-step follow-up sequence.
