PROFESSIONAL SUMMARY

6 years, 13+ international clients, 5+ teams, 5 countries (US, UK, UAE, Germany, New Zealand) — building production systems as a forward deployed developer, I deliver projects from e-commerce storefronts and CRMs to cloud infrastructure and AI-powered automation.

Targeting senior ownership focused remote positions.

CORE SKILLS

- **Languages:** Python, Go, JavaScript, TypeScript
- **Frameworks:** Django, Flask, Vue, React, Node, Express, GraphQL, REST APIs, Tailwind
- **Databases:** PostgreSQL, MySQL, PostGIS, Redis, MongoDB, Firebase Firestore, Elasticsearch
- **Cloud/DevOps:** AWS, Azure, DigitalOcean, Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, ArgoCD
- **Tools:** Cursor, Claude, MCP, Git/GitHub/GitLab/Bitbucket

PROFESSIONAL EXPERIENCE

Cloud & Full-Stack Engineer — MLabs (Remote, UK) — Sept 2024–Present

5+ international clients handled across US, UK, New Zealand

- Processed **100+ daily records** with automated lead intake, order tracking, and analytics — built an end-to-end multi-tenant CRM for a solar energy client (Django, PostgreSQL/PostGIS, Celery, Redis)
- Cut **CPA by 36%**, achieved **3.4x ROAS in 60 days** — integrated Claude API into a CRM backend, **automating 5,000+ monthly** customer communications
- Improved **ROAS by 68–70%**, reduced **CPA by 36–38%** for a UK client — engineered a geospatial marketing intelligence platform (Plotly, Mapbox, PostGIS, Django REST) **tracking 3–4 live ad campaigns**
- Led architected **RESTful API backends** (Django REST Framework) with RBAC and JWT authentication — Secured multi-tenant data access across **5+ client deployments**
- Cloud IAC (Terraform) provisioning Across AWS, Azure, and DigitalOcean — reduced environment setup from manual and error-prone to **72–74% repeatable and auditable**
- **Automated 52–54% processes** — Containerized and deployed full-stack applications (Docker, Kubernetes) into reproducible, version-controlled deployments across client environments
- **3+ environments automated, 70–80% manual effort reduced** by CI/CD pipelines (GitHub Actions, Jenkins, ArgoCD) — cut deployment time (**3 hours → 20 min**)

Full-Stack Engineer — Digital Perception (Remote, Germany) — Feb 2021–Sept 2024

6+ platforms delivered · 10+ junior developers guided

- **Led B2B and B2C platforms** architecture decisions — owned schema design, API structure, and third-party integrations (payments, search, geolocation)
- Cut **TTFB by 83% (1,500ms → 90ms)** for **120,000+ monthly** visitors and **4,700+ products** — migrated a high-traffic headless e-commerce storefront (Nuxt 2 → Nuxt 3, Magento 2 GraphQL, Vue Storefront 2)
- Served **80,000+ monthly visitors** with **6–11 configurations** per product — built an interactive 3D product configurator (Nuxt.js, Vue.js, UnoCSS) for a premium retail client

- Connected **180+ providers** with **600+ clients** via **sub-100ms** search — developed a local services marketplace (Nuxt 3, Algolia, Mapbox, Pinia, TypeScript)
- Built a **multi-language SaaS platform** for a Shopify agency, with **Stripe subscriptions** and **EN/DE localisation** (Nuxt 3, Firebase, vue-i18n)
- Cut content update time from **(2 hours → 10-min)** — architected a **headless CMS** and edge-deployed storefront (Strapi, Nuxt 3, Cloudflare Workers)

KEY PROJECTS

- **Solar CRM & AI Workflow Engine (NZ)** — Unified fragmented SaaS tools into one Django/PostgreSQL CRM with Claude API-driven customer communication. Saved **€11K–€23K/year** in licensing; 5,000+ automated monthly messages; **36% CPA** cut; **3.4x ROAS** in **60** days; **100+** users.
- **Multi-Cloud Kubernetes Platform (US/UAE)** — Provisioned self-managed HA Kubernetes clusters from raw compute across AWS, Azure, and DigitalOcean using kubeadm and Terraform. **7** microservices; **99.99%** uptime; zero vendor lock-in; zero manual steps; full observability stack [Istio, ArgoCD, Prometheus, Grafana, Loki, Jaeger].
- **Secure Software Supply Chain (US)** — 3-layered container verification pipeline with keyless image signing via **Cosign/OIDC**, dual vulnerability scanning via Trivy and Gype, automated **SBOM** generation, and Kyverno admission controllers blocking all unsigned workloads. **8+** images scanned per deployment; **100%** audit compliance; credential rot eliminated.
- **PapierFischer — Headless E-Commerce Storefront (Germany)** — Migrated a high-traffic Magento 2/Vue Storefront 2 storefront from Nuxt 2 to Nuxt 3, with Docker-based deployment and CI/CD (GitHub Actions). Cut TTFB by **83% (1,500ms → 90ms)** for **120,000+** monthly visitors and **4,700+** products.
- **Find 24 — Service Marketplace** — Full-stack project with Algolia search and Mapbox live provider mapping. **180+** providers, **600+** clients, **sub-100ms** search, **3** auth methods.
- **Ask AR Tariq (Personal)** — Software Audit Scorecard — Independent product: free **8-question** software audit scorecard plus a **spintax-based** outreach engine (Google Apps Script, Gmail API) sending **400+** monthly emails across a **3-step** follow-up sequence.

12+ end-to-end other projects at <https://artariq.dev>

EDUCATION

Bachelor of Science in Computer Science — COMSATS University Islamabad, Pakistan (July 2019–May 2023)

Focus: Distributed Systems, Advanced Database Systems, Software Architecture, Network Security
