PROFESSIONAL SUMMARY

Full-stack and cloud-native engineer with 5+ years delivering production systems for international clients across the US, UK, UAE, Germany, and New Zealand. Comfortable across the full delivery surface – from complex backends and intricate frontends to LLM-integrated workflows and Kubernetes clusters. Built for environments where shipping clean, maintainable systems matters more than hype.

CORE SKILLS

- **AI Innovation & Growth:** Generative AI Integration (Anthropic Claude/ OpenAi/ DeepSeek API), Marketing Tech Automation (Google Ads API, Meta Ads API).
- **Applications & Data:** Python (Django, Flask), Node.js, Nuxt 3, Vue.js, React.js, Next.js PostgreSQL/PostGIS, Redis, GraphQL, Strapi.
- **Cloud & Devops:** Linux, Github Actions, CI/CD, Agile/Scrum Terraform, AWS, Azure, Kubernetes, ArgoCD, CloudFlare
- **Security :** Cosign, Kyverno, Falco, OPA, GuardDuty, OIDC

PROFESSIONAL EXPERIENCE

Cloud Native Full-Stack Engineer

International Clients (US, UK, UAE & NZ) | 2024 – Present

- Built multi-tenant Django backends with async task processing for client data workflows, integrated Claude API to automate 5,000+ monthly communications – cutting CPA by 36% and saving €11-23K year-one in SaaS overhead [Django, PostgreSQL, Celery, Redis, Claude API]
- Provisioned self-managed Kubernetes clusters from raw compute across AWS, Azure, and DigitalOcean – 43 resources, zero manual steps, no vendor lock-in [kubeadm, Terraform, ArgoCD, Helm]
- Built geospatial marketing dashboards with live conversion tracking, improving ROAS by 68-70% and reducing CPA by 36-38% across two client campaigns [Plotly, Mapbox, PostGIS, Google Ads API, Meta Ads API]
- Managed multi-environment infrastructure across dev, staging, and prod using GitOps with automated self-healing – all provisioned via Terraform with no manual intervention [ArgoCD, Helm, Kustomize, Terraform]
- Designed and managed cloud infrastructure for client projects – provisioning compute, networking, and storage on AWS and DigitalOcean, with containerised deployments and environment parity across staging and production [Docker, AWS EC2, DigitalOcean, Nginx, GitHub Actions]

Full-Stack Engineer

Digital Perception | International Clients (UK & Germany) | 2021 – 2024

- Built and shipped 6 production platforms for UK and German clients – luxury e-commerce, SaaS, agency sites, and interactive configurators
- Delivered a headless Magento 2 storefront for PapierFischer (papierfischer.de), a 50+ brand luxury stationery retailer (Montblanc, LAMY, Kaweco, Faber-Castell), serving both B2C and a separate B2B office channel (fischer-office.de) from a single backend [Vue Storefront 2, Nuxt 2, Magento 2 GraphQL]

- Built an interactive 3D kitchen configurator for Kitchenz (kitchenz.de), Germany's #1 rated online kitchen retailer, official dealer for Nolte and Nobilia premium brands [Nuxt.js, Vue.js, UnoCSS]
- Architected 021.uk with a headless Strapi CMS on Cloudflare Workers edge — non-technical teams ship content with zero developer involvement [Nuxt 3, Strapi, Cloudflare Workers]
- Built Birdie (birdiecommerce.com), a multi-language Shopify agency SaaS with Stripe subscriptions and EN/DE localisation [Nuxt 3, Firebase, vue-i18n]
- Handled CI/CD setup, containerisation, and third-party integrations across all client projects [Docker, GitHub Actions, GitLab, Stripe, EmailOctopus, Calendly]

KEY PROJECTS

1. Multi-Cloud Kubernetes Platform

- Context: Managed cloud Kubernetes solutions obscure underlying operations, making deep configuration auditing and direct cost optimization difficult.
- Delivery: Provisioned high-availability control planes from raw compute. Managed 12 microservices with mTLS encryption, automated GitOps syncing, and an end-to-end observability stack to achieve complete platform portability across cloud providers [kubeadm, Istio, ArgoCD, Prometheus, Grafana].

2. Solar CRM & AI Workflow Engine

- Context: Client operated on a fragmented suite of disjointed SaaS tools, causing operational friction and high licensing overhead.
- Delivery: Built a unified multi-tenant CRM that saved €11K-€23K in year-one operational costs. Handled background data processing and used the Claude API to automate customer communications, dropping user acquisition costs by 36% [Django, PostgreSQL, Celery, Claude API].

3. Secure Software Supply Chain

- Context: Standard CI/CD pipelines lack strict provenance checks, leaving production clusters vulnerable to unsigned or altered container images.
- Delivery: Engineered a 3-layer verification system mapping commits to live pods. Implemented vulnerability checking, automated SBOM generation, and keyless image signing via OIDC, utilizing admission controllers to block unauthorized workloads [Cosign, Kyverno, Trivy, Falco].

4. Headless CMS & Edge Storefront

- Context: Tightly coupled marketing pages required constant developer intervention for routine content updates, slowing down business execution.
- Delivery: Separated content from core application logic via a headless backend. Built a high-performance frontend with server-side rendering and edge deployment, allowing non-technical teams to modify global content instantly without code changes [Strapi, Nuxt 3, Cloudflare Workers].
